

Taking on board the feedback from my initial nightclub/ web-site CAPTCHA design, I developed the art style further and included a few more interactions to increase the immersion.

Opening page offers contextual information about the following CAPTCHA experience.

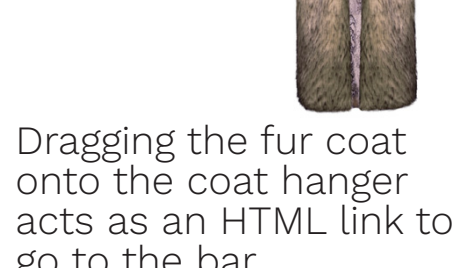

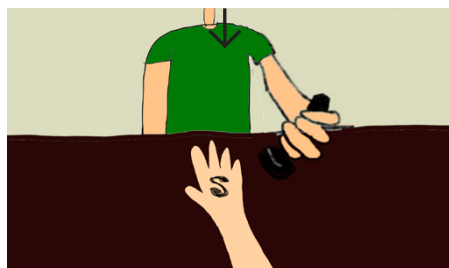

Clicking on the club door will taken you to the club's ticket office.

Click on the hand to activate an html link, simulating an animation of getting a stamp.

After being stamped, the user can click again to be taken to the cloakroom scene.

Dragging the fur coat onto the coat hanger acts as an HTML link to go to the bar.
