

Each icon is a CSS styled HTML hyperlink connected to a separate page. I copied the HTML and CSS of the desktop background and footer onto each page and added content on a layer above using the z-index command. This creates the illusion of opening a window.

Opening the Documents folder reveals further folders, and folders with those folders. A rabbit hole of folders, becoming increasingly secretive. Eventually the user will reach the locked folder. A custom made icon that refuses access. Upon clicking the user is met with an error message. Requesting a 'key' to grant entry.

This interaction creates a goal for the user to try and achieve - giving further input to complete the CAPTCHRs.
