

you ever heard of
synthetic media?

No, I haven't. What is it?

It's a type of media that's
created by computers
trained on large
databases of human
data, like images and
sounds, and then uses
that data to create new
media that looks and
sounds like it was made
by a human.

That's interesting. So, it's
like a computer is
pretending to be human?

Ye, and the media is
indistinguishable from
something that a human
would create.

I wonder if it'll start
mimicking humans

I mean it's definitely
challenging the idea of
human identify
